Civilizations come
and go... ...and
they don't always
go quietly. In our
global civilization,
the consequence of

Where To Download

it all crashing is going to be far-reaching, and with nowhere to hide.

With so many moving parts and a lack of long-term stewardship by our leaders, odds are good that you will want to make at least a few preparations... but the question you

Where To Download

often ask is: how?
That's where I
come in. In Beyond
Collapse, we not
only get you
prepared for such
an event, but we
also help you and
your fellow
survivors come
together, defend
one another,
preserve what may
be lost and rebuild

civilization
together. Unlike
most books of this
type, we don't
require a
paramilitary
mindset, tinfoil
headgear, bunkers,
or living "off-grid."
Everything in here
is geared towards
gaining skills and
resources that are
just as useful and

socially acceptable
in peaceful times
as they will be
when society and
civilization crashes.
You will find this
book useful for
beginners, or those
who have been
preparing for a
long time. The best
part is, you will find
it useful even if
civilization holds up

An application of differential forms for the study of some local and global aspects of the differential geometry of surfaces.

Differential forms

are introduced in a simple way that will make them attractive to "users" of mathematics. A brief and elementary introduction to differentiable manifolds is given so that the main theorem, namely Stokes' theorem,

can be presented in its natural setting. The applications consist in developing the method of moving frames expounded by E. Cartan to study the local differential geometry of immersed surfaces in R^3 as well as the intrinsic geometry

of surfaces. This is then collated in the last chapter to present Chern's proof of the Gauss-Bonnet theorem for compact surfaces.
