Contemporary Fixed Prosthodontics, 4th Edition is a comprehensive, user-friendly text that offers dental students and practitioners an excellent opportunity to understand the basic principles of fixed prosthodontics. This text provides a strong foundation in basic science, followed by practical step-by-step clinical applications.

Fixed Prosthodontics is the branch of Prosthodontics that deals with replacement of missing tooth or teeth and associated structures by means of prosthesis that can't be removed by the patient Biologically acceptable fixed Prosthodontic treatment demands that prepared teeth be protected and stabilized with provisional restorations that resemble the form and function of the definitive Prosthesis. They are essential in the maintenance of periodontal health and protection of pulp from thermal insult. This is especially useful with treatment involving esthetic need of the patient. Variety of materials and techniques are available for fabrication of temporary fixed prosthesis. It may be performed or customized. It is the choice of the Prosthodontist to select an appropriate material and technique to fabricate the interim restoration based on the clinical presentation and patients need. Recent materials and advanced techniques are described here with illustrated pictures in a very simple, easy to understand and self explanatory manner. This book may be a useful guide for undergraduates, postgraduate students, laboratory assistants as well as clinicians

Find practical step-by-step guidelines to hundreds of fixed prosthodontics procedures! Contemporary Fixed Prosthodontics, 5th Edition provides a strong foundation in basic science along with clear descriptions of clinical applications. Using more than 3,000 high-quality drawings and photographs, this reference covers everything from tooth preparation to prostheses and restorations to follow-up care. New to this edition is a chapter on periodontal considerations plus new sections on topics such as cone beam imaging and virtual articulators. From respected prosthodontics educators and clinicians Stephen Rosenstiel, Martin Land, and Junhei Fujimoto, Contemporary Fixed Prosthodontics includes separate sections covering planning and preparation, clinical procedures, and laboratory procedures, making it easier to look up the information you need. Illustrated, full-color step-by-step procedures walk you through all the steps of treatment from the beginning to the final treatment result. Summary charts provide a quick, at-glance review of specific procedures (such as Class II inlay preparation and all-ceramic crown preparation), highlighting the indications, contraindications, advantages, disadvantages, preparation steps, recommended armamentarium, and criteria. Prosthodontic Diagnostic Index helps you determine the appropriate treatments for completely edentulous, partially edentulous, and dentate patients, using guidelines and illustrations from the American College of Prosthodontists. Text boxes accompany selected illustrations, presenting quick facts and tips relating to techniques or concepts. Study questions offer an opportunity to test your knowledge and comprehension at the end of each chapter. Useful appendices list dental materials, equipment, and manufacturers. NEW full-color photos and drawings enhance your understanding and comprehension of each topic, and show the newest instruments and equipment. NEW Periodontal Considerations chapter offers a new approach to comprehensive fixed prosthodontics treatment, covering the concepts and clinical modes of periodontal therapy available prior to the development of an appropriate diagnosis and treatment plan. NEW section on digital impression techniques describes how to create a virtual, computer-generated replica of the hard and soft tissues in the mouth using lasers and other optical scanning devices. NEW section on virtual articulators addresses the new software tool providing dynamic visualization of the occlusal surface, eliminating the need for a mechanical articulator, with modules discussing the contact of the occlusal surface of the maxilla and mandible and the relation to the condylar movement. NEW section on cone beam imaging allows clear visualization of osseous contours and bone volume, facilitating better decisions about the size of implant fixtures that realistically can be accommodated. NEW section on digital interim fixed restorations covers the fabrication of large multi-unit composite or polymethyl methacrylate external surface forms in advance for use with indirect/direct restorative techniques.

Making an impression in fixed prosthodontics is especially one of the most challenging procedures in dentistry. Any compromise in relation to material, time or technique on the part of dentist will lead to deteriorated standard of service and eventual degradation of professional ethics. The present laboratory study was carried out to determine the current standards of fixed prosthodontics practiced by private dental practitioners and the quality of impressions received by private dental laboratories in Bangalore city employed in fabrication of fixed partial denture prosthesis. The study was carried out in two parts; the first part was a questionnaire pro-forma, which was filled by private dental practitioners. In second part, elastomeric rubber base fixed partial denture impressions from various dental laboratories were examined. Considering the various aspects of the present study, it is concluded that the dentist must be certain that the search for short cuts in fixed prosthodontic technique, the abbreviation of chair and laboratory time, and the delegation of responsibilities should not lead to a decrease in the quality of patient care.
