The term "forensic

Online Library

Forensic

serology" has generally been used to refer to the identification and individualization of biological evidence, including all the activities and tests associated with the evaluation and typing of biological evidence in criminal matters. The word "serology" derived from serum, the fraction of blood containing antibodies.

DNA analysis is generally

Online Library

Forensic

limited to things that are biological in nature.

Almost all the biological evidence are applicable for DNA analysis except to those bodily fluid without nucleated cells such as tears, perspiration and serum. DNA can also be trace in the sample of hairs with follicles where the DNA are extracted from the cell of follicles.
