The alimentary canal -- the much-maligned tube from mouth to rear -- is as taboo, in its way, as the cadavers in Stiff, and as surreal as the universe of zero gravity explored in Packing for Mars. In Gulp we meet the scientists who tackle the questions no one else thinks —or has the courage —to ask. How much can you eat before your stomach bursts?

Gulp: Adventures on the Alimentary Canal

Gulp: Adventures on the Alimentary Canal- Mary Roach. January 31, 2020 Stephanie. I adore Mary Roach. Reading Stiff set off a fascination about what happens- or can happen, if we so choose- to our remains after we die, and has introduced me to so many other excellent books (such as Smoke Gets in Your Eyes: And Other Lessons From the Crematory by Caitlin Doughty, and Death’s Acre: Inside the Legendary Forensic Lab the Body Farm Where the Dead Do Tell Tales by William Bass and Jon Jefferson).

Gulp: Adventures on the Alimentary Canal- Mary Roach – She ...

The alimentary canal is classic Mary Roach terrain: the questions explored in Gulp are as taboo, in their way, as the cadavers in Stiff and every bit as surreal as the universe of zero gravity explored in Packing for Mars. Why is crunchy food so appealing? Why is it so hard to find words for flavors and smells?

The humorous science writer offers a tour of the human digestive system, explaining why the stomach doesn't digest itself and whether constipation can kill you.

The humor scientist behind Stiff: The Curious Lives of Human Cadavers and Spook: Science Tackles the Afterlife takes a tour of the human digestive system, explaining why the stomach doesn't digest itself and whether constipation can kill you.

The humor scientist behind Stiff: The Curious Lives of Human Cadavers and Spook: Science Tackles the Afterlife takes a tour of the human digestive system, explaining why the stomach doesn't digest itself and whether constipation can kill you.

The irresistible, ever-curious, and always best-selling Mary Roach returns with a new adventure to the invisible realm we carry around inside. “America’s funniest science writer” (Washington Post) takes us down the hatch on an unforgettable tour. The alimentary canal is classic Mary Roach terrain: the questions explored in Gulp are as taboo, in their way, as the cadavers in Stiff and every bit as surreal as the universe of zero gravity explored in Packing for Mars. Why is crunchy food so appealing? Why is it so hard to find words for flavors and smells? Why doesn’t the stomach digest itself? How much can you eat before your stomach bursts? Can constipation kill you? Did it kill Elvis? In Gulp we meet scientists who tackle the questions no one else thinks of—or has the courage to ask. We go on location to a pet-food taste-test lab, a fecal transplant, and into a live stomach to observe the fate of a meal. With Roach at our side, we travel the world, meeting murderers and mad scientists, Eskimos and exorcists (who have occasionally administered holy water rectally), rabbis and terrorists—who, it turns out, for practical reasons do not conceal bombs in their digestive tracts. Like all of Roach’s books, Gulp is as much about human beings as it is about human bodies.

Eating is the most pleasurable, gross, necessary, unspeakable biological process we undertake. But very few of us realise what strange wet miracles of science operate inside us after every meal - let alone have pondered the results (of the research). How have physicists made crisps crispier? What do laundry detergent and saliva have in common? Was self-styled 'nutritional economist' Horace Fletcher right to persuade millions of people that chewing a bite of shallot seven hundred times would yield double the vitamins? In her trademark, laugh-out-loud style, Mary Roach breaks bread with spit connoisseurs, beer and pet-food tasters, stomach slugs, potato crisp engineers, enema exorcists, rectum-examining prison guards, competitive hot dog eaters, Elvis' doctor, and many more as she investigates the beginning, and the end, of our food.

A New York Times / National Bestseller "America's funniest science writer" (Washington Post) Mary Roach explores the science of keeping human beings intact, awake, sane, uninfected, and uninfested in the bizarre and extreme circumstances of war. Grunt tackles the science behind some of a soldier's most challenging adversaries—panic, exhaustion, heat, noise—and introduces us to the scientists who seek to conquer them. Mary Roach dodges hostile fire with the U.S. Marine Corps Paintball Team as part of a study on hearing loss and survivability in combat. She visits the fashion design studio of U.S. Army Natick Labs and learns why a zipper is a problem for a sniper. She visits a repurposed movie studio where amputee actors help prepare Marine Corps medics for the shock and gore of combat wounds. At Camp Lemmonier, Djibouti, in east Africa, we learn how diarrhea can be a threat to national security. Roach samples caffeinated meat, sniffs an archival sample of a World War II stink bomb, and stays up all night with the crew tending the missiles on the nuclear submarine USS Tennessee. She answers questions not found in any other book on the military: Why is DARPA interested in ducks? How is a wedding gown like a bomb suit? Why are shrimp more dangerous to sailors than sharks? Take a tour of duty with Roach, and you'll never see our nation's defenders in the same way again.

From acclaimed, New York Times best-selling author Mary Roach comes the complete collection of her “My Planet” articles published in Reader’s Digest. She was a hit columnist in the magazine, and this book features the articles she wrote in that time. Insightful and hilarious, Mary explores the ins and outs of the modern world: marriage, friends, family, food, technology, customer service, dental floss, and ants—she leaves no element of the American experience unchecked for its inherent paradoxes, pleasures, and foibles. On Cleanliness: Ed has crud vision, and I don’t. I don’t notice filth. Ed sees it everywhere. I am reasonably convinced that Ed can actually see bacteria. . . . He confessed he didn’t like me using his bathrobe because I’d wear it while sitting on the toilet. “It’s not like it goes in the water,” I protested, though if you counted the sash as part of the robe, this wasn’t strictly true. On the Internet: The Internet is a boon for hypochondriacs like me. Right now, for instance, I’m feeling a shooting pain on the side of my neck. A Web search produces five matches, the first three for a condition called Arnold-Chiari Malformation. While my husband, Ed, reads over my shoulder, I recite symptoms from the list. “General clumsiness’ and ‘general imbalance,” I say, as though announcing arrivals at the Marine Corps Ball. “‘Difficulty driving,’ ‘lack of taste,’ ‘difficulty feeling feet on ground.’” “Those aren’t symptoms,” says Ed. “Those are your character flaws.” On Fashion: My husband recently made me try on a bikini. A bikini is not so much a garment as a cloth-based reminder that your parts have been migrating all these years. My waist, I realized that day in the dressing room, has completely disappeared beneath my rib cage, which now rests directly on my hips. I’m exhibiting continental drift in reverse. On Eating Healthy: So Ed and I were eating a lot of vegetables. Vegetables on pasta, vegetables on rice. This was extremely healthy, until you got to the part where Ed and I are found in the kitchen at 10 p.m., feeding on Froot Loops and tubes of cookie dough.

A look inside the world of forensics examines the use of human cadavers in a wide range of endeavors, including research into new surgical procedures, space exploration, and a Tennessee human decay research facility.

A New York Times Bestseller “Rich in dexterous innuendo, laugh-out-loud humor and illuminating fact. It’s compulsively readable.” —Los Angeles Times Book Review In ?Bonk, ?the best-selling author of Stiff turns her outrageous curiosity and insight on the most alluring scientific subject of all: sex. Can a person think herself to orgasm? Why doesn’t Viagra help women-or, for that matter, pandas? Can a dead man get an erection? Is vaginal orgasm a myth? Mary Roach shows us how and why sexual arousal and orgasm-two of the most complex, delightful, and amazing scientific phenomena on earth-can be so hard to achieve and what science is doing to make the bedroom a more satisfying place.

The best-selling author of Stiff and Bonk trains her considerable wit and curiosity on the human soul. “What happens when we die? Does the light just go out and that’s that—the million-year nap? Or will some part of my personality, my me-ness persist? What will that feel like? What will I do all day? Is there a place to plug in my lap-top?” In an attempt to find out, Mary Roach brings her tireless curiosity to bear on an array of contemporary and historical soul-searchers: scientists, schemers, engineers, mediums, all trying to prove (or disprove) that life goes on after we die.
