The four-step process for managing classified information. Good practice says that classification should be done via the following process: This means that: (1) the information should be entered in the Inventory of Assets (control A.8.1.1 of ISO 27001), (2) it should be classified (A.8.2.1), (3) then it should be labeled (A.8.2.2), and finally (4) it should be handled in a secure way (A.8.2.3).

ISO 27001 Information Classification - The 4-Step Guide

2) Classification. Next, you need to classify the information. Asset owners are responsible for this, but it's a good idea for senior management to provide guidelines based on the results of the organisation's ISO 27001 risk assessment. Information that would be affected by bigger risks should generally be given a higher level of confidentiality.

ISO 27001 & Information Classification: Free 4-Step Guide

That overarching policy becomes much more believable and powerful with independent certification for ISO 27001:2013 from UKAS behind it. Policies also provide the backbone of information security and should be part of the education, training and awareness programme in line with A7.2.2.

ISO 27001 Annex A.5 - Information Security Policies

Information Classification Software Information Classification Software for ISO 27001 In order to protect your information appropriately, you first need to appreciate its value. As part of an ISO 27001-compliant information security management system (ISMS), it is necessary to classify all of the organisation's information assets.

Information Classification Software - IT Governance

Information classification is a key part of any ISO 27001 project. In the standard, control objective A7.2 is titled 'Information Classification'. The objective of this control is "to ensure that information receives an appropriate level of protection".

Why is information classification relevant to ISO 27001?

When it comes to keeping information assets secure, organizations can rely on the ISO/IEC 27000 family. ISO/IEC 27001 is widely known, providing requirements for an information security management system (ISMS), though there are more than a dozen standards in the ISO/IEC 27000 family.

ISO - ISO/IEC 27001 — Information security management

Data Classification for ISO 27001 ISO/IEC 27001 is an international standard for the establishment, implementation, maintenance and continuous improvement of an information security management system (ISMS). This voluntary standard is useful for organizations across all industries.

Data Classification for Compliance: Looking at the Nuances

Annex A.8.1 is about responsibility for assets. The objective in this Annex is to identify information assets in scope for the management system and define appropriate protection responsibilities. It's an important part of the information security management system (ISMS) especially if you'd like to achieve ISO 27001 certification.

ISO 27001 Annex A.8 - Asset Management

This control, possibly above all others, is the one which bears out the three tenets of the standard – confidentiality, integrity and availability. Classification should align with the access control policy. Labelling. A little like document and records control, information sharing needs to be controlled by labelling.
