Guzdial introduces programming as a way of creating and manipulating media—a context familiar and intriguing to today's students. Students begin actual programming early on (sometimes over 100 lines of code in the second assignment). Guzdial's approach has met with substantial success in class testing.

The media computation approach  
used in this book starts with what  
students use computers for:  
image manipulation, digital  
music, web pages, games, and so  
on. We then explain programming  
and computing in terms of these  
activities.

They created the Media Computation (MediaComp) approach, which motivates students to write programs that manipulate and create digital media, such as pictures, sounds, and videos. Now in use in nearly 200 schools around the world, this contextualized approach to introductory Computer Science attracts students not motivated by classical algorithmic problems addressed in traditional computer science education. They also lead “Georgia Computes!” an NSF-

Media Computation (nicknamed "MediaComp") is a contextualized approach to introducing computing using a ubiquitous theme of manipulating media. The critical characteristic of MediaComp is that students create expressive media by manipulating computational materials (like arrays and linked lists) at a lower-level of abstraction.

uses multimedia applications to motivate introductory computer science majors or non-majors. The book's hands-on approach shows how programs can be used to build multimedia computer science applications that include sound, graphics, music, pictures, and movies. The students learn a key set of computer science tools and topics, as well as programming skills; such as how to design and use algorithms, and practical software engineering methods.
