This book is a tutorial presentation of the science, techniques, and machines of ion implantation. The first section of this book concerns the science of ion implantation. It covers the historical development of the field, and the basic theory of energetic ion penetration of solids. The major concentration of this section is to explain the nature of the creation of damage in crystalline silicon during ion implantation, and the methods which can be used to recover

Ion implantation is a low-temperature process by which ions of one element are accelerated into a solid target, thereby changing the physical, chemical, or electrical properties of the target. Ion implantation is used in semiconductor device fabrication and in metal finishing, as well as in materials science research. The ions can alter the elemental composition of the target (if the ions differ in composition from the target) if they stop and remain in the target.
