Mechanical engineering, an engineering discipline born of the needs of the industrial revolution, is once again asked to do its substantial share in the call for industrial renewal. The general call is urgent as we face profound issues of productivity and competitiveness that require engineering solutions, among others. The Mechanical Engineering Series features graduate texts and research monographs intended to address the need for information in contemporary areas of mechanical engineering. The series is conceived as a comprehensive one that will cover a broad range of concentrations important to mechanical engineering graduate education and research. We are fortunate to have a distinguished roster of consulting editors, each an expert in one of the areas of concentration. The names of the consulting editors are listed on the front page of the volume. The areas of concentration are applied mechanics, biomechanics, computational mechanics, dynamic systems and control, energetics, mechanics of material, processing, thermal science, and tribology. Professor Leckie, the consulting editor for applied mechanics, and I are pleased to present this volume of the series: Kinematic and Dynamic Simulation of Multibody Systems: The Real-Time Challenge by Professors Garcia de Jalón and Bayo. The selection of this volume underscores again the interest of the Mechanical Engineering Series to provide our readers with topical monographs as well as graduate texts. Austin Texas Frederick F. Ling v The first author dedicates this book to the memory of Prof F. Tegerizo (1988), who introduced him to kinematics.

The important interaction between modeling and solution techniques is demonstrated by using a simplified multibody model of a truck throughout the book to illustrate all key concepts.

Get Quick Access to the NEC Essentials Turn to NEC 2008 Need to Know for quick access to vital National Electrical Code (NEC) information that you need. This expert resource explains and interprets key material from the first four chapters of the NEC, including general installation requirements...branch circuits...feeders...services...overcurrent protection ...grounding...conductors...conduits...cables...fixture wiring...switches... receptacles...lighting...motors...a/c and refrigeration...and generators—plus critical tables from Chapter 9. Packed with on-target illustrations, this essential compliance tool contains calculations and formulas commonly used to determine conduit and conductor sizes, required ampacities, adjustment multipliers, and electrical loads. This guide also presents a listing of specialty topics such as Emergency Systems, Communications, and Special Occupancy, as well as a cross-reference table with types of installations and where to find applicable Code. Designed to save time and money, reduce errors, and increase safety, NEC 2008 Need To Know features: • Clear explanations and interpretations of in-demand NEC information • Commonly used calculations and formulas • A listing of specialty topics keyed to applicable Code • A handy cross-reference table for quick access to crucial material Inside This On-the-Job Guide to Vital NEC Information • General Requirements for Electrical Installations • Branch Circuits and Feeders • Branch Circuit Feeders & Service Calculations and Electric Services • Overcurrent Protection and Transformers • Grounding and Bonding • Wiring Methods • Conductors • Boxes and Cablebus • Lighting Requirements • Motors • Refrigeration and A/C • Generators • Understanding and Applying NEC Chapter 9 Tables • Code Locations and References for Additional Codes • Appendices

A discussion of the science fiction cartoon series "Robotech" featuring a collection of drawings of the show's characters illustrated by comic artists. Also explores the popularity of Japanese animation.
