Applications  
Multimedia Systems  
Environments  
Architecture - BrainKart  
Application servers  
provide an environment  
to run code such as Java  
or PHP to implement  
business logic such as  
authorization &  
authentication,  
transactions, business  
rules and data  
processing.

## Applications Environments Application Server - Simplifiable

---

Generally speaking, the term development environment would refer to the entire environment, including development, staging, and production servers, whereas the IDE just refers to the local

# Bookmark File PDF Multimedia

application used to  
code. Of course, there is  
much overlap as you use  
an IDE for debugging  
just as you use a  
development server to  
test.
