This book provides
the veterinary
practitioner with an
explanation of the
meaning of
laboratory results
(biochemical,
haematological and

laboratory) in the diagnosis of disorders in small animals. It enables veterinary surgeons in small animal practice to interpret the results of those laboratory tests that are commonly performed in order to arrive at a diagnosis or prognosis. Research

Access Free Veterinary

has shown that this is one skill in which many veterinarians believe themselves to be deficient and would welcome guidance. This volume explains the possible meanings of the values that could be obtained. The book covers the areas of haematology,

given on the

sample collection
